

# Brace Map

The diagram illustrates a brace map structure. It consists of a large left-facing curly brace on the left side, which encompasses a central column of ten horizontal lines. To the right of this central column, there are two smaller right-facing curly braces. The upper brace groups the top three lines of the central column, and the lower brace groups the bottom three lines. To the right of these two braces, there are two more horizontal lines, one above and one below the space between the two braces, representing a further level of nesting or a separate set of lines.
